

What is a Debt-to-Income Ratio?

One of the quickest & most revealing ways to get a handle on your current financial picture is to calculate your debt-to-income ratio.

Lenders look at your debt-to-income ratio when they are considering if you are credit-worthy.

Your debt-to-income ratio is calculated by dividing monthly minimum debt payments, including your proposed mortgage payment by your monthly gross income.

For example, a couple with a combined monthly gross income of \$7,500 making minimum payments of \$800 on loans and credit cards, that has a proposed mortgage payment of \$2300 has a debt-to-income ratio of 41% ($\$800 + \$2300 / \$7500 = .41$).
